Product presentation (max 100 words)

Steer axle tyre featuring innovative structure, compounds and tread design to provide maximum steering precision and grip on any kind of road surface in winter conditions: snow, wet and dry.

Description of application (50-70 words)

Products designed for use under critical weather conditions, snow and ice.

Product Feature (50-70 words)

- New shoulder tread contour for a correct distribution of footprint contact pressure and RSR technology provide great even wear and mileage.
- Dense siping allows excellent grip and steering control on wet surfaces.
- Increased tread width promotes mileage.
- Deep siping in central rib bridges promote traction and snow grip beyond half tyre wear.
