**Product presentation** (max 100 words)

Drive axle tyre featuring innovative structure, compounds and tread design to provide maximum steering precision and grip on any kind of road surface in winter conditions: snow, wet and dry.

**Description of application** (50-70 words)

Products designed for use under critical weather conditions, snow and ice.

**Product Feature** (50-70 words)

- The optimised sequence of dense transversal siping and grooves promote snow trapping providing excellent “snow on snow” grip for better traction and stability in case of wet and slippery surfaces.
- Directional tread pattern optimises grip on both wet and dry surfaces.
- Reduced tread block mobility limits rolling resistance, promotes fuel saving and enhances even wear.
- Increased tread width promotes mileage.
