

WINTER SOTTOZERO *Serie II*

 CAR —  WINTER —  TOURING —  POWER CONTROL

WINTER SOTTOZERO™ Serie II is the ideal choice for sports cars and top end vehicles, balancing performance, safety and respect for the environment. The asymmetric tread pattern is divided into two distinct elements. The inner area expels water effectively whilst the external area, with its more rigid and spaced blocks, ensures high levels of grip on snow. Characterised by a record number of homologations, this product is the choice of premium car manufactures as the best Winter Original Equipment product.

ASYMMETRICAL TREAD PATTERN: INTERNAL AREA

Snow traction and riding comfort

ASYMMETRICAL TREAD PATTERN: EXTERNAL AREA

Safety on wet surfaces and enhanced handling in the dry

NEW TEMPERATURE DYNAMIC COMPOUND (TDC)

Safety and enjoyment when driving in autumn and winter weather conditions

PATENTED INTERACTIVE BRICKWORK SIPING (I.B.S.) TECHNOLOGY FOR SIPE COSTRUCTION

Improved grip for traction and braking performance. Stability for improved handling
